

Svetlana Shakhova

CONTENT MANAGER · SEO COPYWRITER · AI BUILDER

Telegram @LanaShakh · svetla.shakh@gmail.com · Barnaul, GMT+7, remote · lanashakh.github.io

I write and produce content for products and agencies: blogs, SEO copy, landing pages, expert articles. My core strength is the combination of **SEO + editing + prompt engineering**. I work with AI every day — not only writing with it, but **building working tools, educational games and multi-page sites (vibe coding)**, testing everything by hand and standing behind the facts. Comfortable with feedback and revisions. Russian — native, English — B2 in written work.

EXPERIENCE

It's AI (its-ai.org) — Content Manager, SEO Copywriter

January 2026 — present

AI detection · English-language blog

- Launched the English-language blog from scratch as the project's first copywriter: editorial policy, style guide, templates, source-work standards.
- Built the pipeline from research to publication in Django CMS: keyword semantics, structure, LSI, meta tags, HTML layout with custom components.
- Run the brand's social media: expert posts on LinkedIn, threads on X/Twitter.
- **Result:** +21% site traffic in March 2026 (SimilarWeb), +81% X/Twitter audience; texts consistently pass AI detection as human-written.

Multi-brand iGaming network (NDA) — Writing Editor

June — December 2025

iGaming · SEO · team editing

- Wrote homepages, category and bonus pages, and app landing pages to SEO-team briefs; adapted content for different geos and language versions.
- Owned copywriter-team editing and final proofreading.
- Built an intent-based unique-content system, prompts and checklists — **editing time cut in half**.
- Moved a copywriter from manual writing to an AI workflow with no loss of quality.

Artik Agency — Copywriter-Analyst (project)

September 2024 — December 2025

B2B · fintech · crypto · mobile

- Wrote B2B case studies and the expert blog: User Acquisition, mobile marketing, UGC; topics matched to the sales team's goals so articles answered client objections.
- Gathered facts straight from experts: **conducted interviews (including the agency's CEO)** and worked with voice answers — wrote the questions, received audio, distilled it into text.
- Worked with Singular reports and product analytics — data in the articles, not generic claims.
- Improved the visual side: AI-built charts, unified tables. **Rate raised by 20%** at my manager's initiative after probation.

LFCarry — Content Manager, Prompt Engineer

April 2022 — June 2025

SEO · AI workflow · prompts

- Ran the corporate blog and service pages with SEO copy and competitor analysis; published in WordPress and a custom CMS.
- Built an AI content pipeline (research → structure → draft → hand-finishing) — **copywriting sped up 7×, organic traffic +30% in 6 months**.
- Wrote prompts for the support & sales AI assistant; **cut the bot's error rate from 46% to 4.8% in 2 months** and set up answer quality control.
- After the copywriter team was downsized, was retained and promoted to Content Manager.

Earlier

2020 — 2025 · Goat Games (War and Magic), community manager · 2021 — 2022 · Gamegrad, web3 / Axie Infinity community · 2009 — 2021 · banking (Credit Europe Bank, Post Bank), sales team lead

- War and Magic YouTube channel — from zero to 7,500 subscribers; +35% player activity after a communication-strategy change.

AI PRODUCTS & VIBE CODING

Built solo with AI, no developers — from idea to working result.

- ▶ **“Count with the Robot”** — an educational kids' game with voice-over. lanashakh.github.io/igra-robot ↗
My son learned to count to 100 in 2 weeks of playing. A series of learning games for other subjects is in the works.
- ▶ **Miratext analog** (keyword-occurrence checker) — built in 30 minutes when the original service was down, then used it in real work tasks.
- ▶ **Multi-page vanilla-HTML sites** — this portfolio and sites for iGaming projects (under NDA). Built without developers.
- ▶ **AI-course reviews “through a student’s eyes”** — took demos of dozens of AI courses; I break down learning materials for usefulness, accuracy and reproducibility.

SKILLS

Content & editing	SEO copywriting, editing, content strategy, case studies, landing pages, email, UX copy, interviews and voice/audio source work
AI & prompt engineering	ChatGPT, Claude, AI detectors, AI workflow setup, vibe coding (games, sites, tools)
